

SeaLife Micro 2.0 Comparison Chart

Bottom Line:

The SeaLife cameras are optimized for underwater use out of the box. Both Sealife Micro 2.0 cameras automatically correct colors and white balance based on your depth and whether you are using an extra light or not, resulting in much richer images that are more true to life. The results are much better than using a traditional red filter since the white balance is customized to the exact shooting situation such as Snorkel, Dive, External Light, Dual External Lights, or Land shooting.

	 GoPro Hero4 Black	 SeaLife Micro 2.0 32gb	 SeaLife Micro 2.0 64gb
